Part I : Introduction

Shehan Haputhanthri and Shuzhen Liu Model Based Calibration Optimization Using Machine Learning Algorithms

・ロト ・四ト ・ヨト ・ヨト

= 990

Manual powertrain calibration optimization

Requires hardware prototypes Substantial cost Engineering (design validation) time

Design Validation (DV) efficiency improvement

Use high fidelity CAE powertrain models (Simulink) for initial calibration Optimized combination of design variables Reduce prototype vehicles and engineering time Explore designs which would otherwise not be possible

Calibration Optimization of Electrified Powertrains

Electrified vehicles

Complex hardware architecture and software controls 1000s of design (calibration) variables

Finding the optimum design

Millions of design combinations Higher computation time for high fidelity Simulink SIL models Substantial amount of computing resources Cluster/ parallel computing for simulation Machine learning (Genetic Algorithm) for optimization 100s (even 1000s) of designs to run in parallel

くロン 不得 とくき とくき とうきょう

Parallel computing

Running 100s/1000s of designs in parallel Not cost effective with standalone licenses

Parallel/distributed computing licenses for MATLAB & Simulink Parallel Computing Toolbox (PCT) MATLAB Distributed Computing Server (MDCS)

Scalable parallel/distributed computing

Final solution test in workstations (before deployed to HPC) HPC utilization for computation

With varying number of workers

Scalable from sequential to 100s CPUs in parallel

イロト イヨト イヨト

Part II : Infrastructure and Process Development

イロト イヨト イヨト イヨト

Distributed Computing Capability

Shehan Haputhanthri and Shuzhen Liu Model Based Calibration Optimization Using Machine Learning Algorithms

Cost Effective Parallel/Distributed Computing Licenses

Model Based Calibration Optimization (MBCO) team

Purchased 1000 MDCS licenses Added to existing PCT/MDCS license pool Dedicated "Project Group" For license management

ъ

E

Machine Learning Algorithms for Optimization

Need of machine learning algorithms

All design possibilities can't be evaluated With in the simulation budget and available time Change calibration variables Optimize for multi-objectives Subjected to multi-constraints

Alternatives evaluating (in-progress)

No "all-in-one" solution algorithm MATLAB Global Optimization Toolbox modeFrontier Several other commercial optimization SW packages

Currently modeFrontier is used as the optimization tool

◆□ > ◆□ > ◆目 > ◆目 > 目 のへで

Compatibility with non MathWorks SW tools Off the shelf optimization algorithms

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

"Off the shelf" optimization SW packages - Issues

Parallel jobs are launched using internal schedulers

Individual job submitted to cluster

Uses standalone license

Do not use PCT and MDCS for MATLAB & Simulink Not suitable for large scale parallel computing

Final Requirements and Solution

Combining modeFrontier and MATLAB

MATLAB - Capable of parallelization to any scale modeFrontier - License issue Simulations to run in HPC

Must use distributed computing licenses

PCT and MDCS Jobs submitted to HPC from a remote MATLAB Client

New in-house tool and a process developed

MATLAB GUI - ModefrontierSCVSP Copyrighted Combines modeFrontier and MATLAB & Simulink Meets above requirements

医肾管肠 医菌素

Challenge - 4 Unconnected Dots

License Usage PCT and MDCS

・ロット (雪) () () () ()

Connecting Dots via a MATLAB GUI - ModefrontierSCVSP

Genetic algorithm
Model + cal file
License mgt.
Job submission
Results collection
Results reporting

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

ModefrontierSCVSP - Standardized Modular Solution

MATLAB GUI - Glue Code

Combines HW, SW and Licenses seamlessly Across both Windows and Linux platforms Uses PCT/MDCS Manages the large scale Simulink simulations

Modular (runs simulations in)

In workstation with PCT (limited by physical cores) HPC with MDCS (limited by MDCS licenses)

User friendly GUI

No coding/programming required Easy to train, learn and apply

くロン 不得 とくき とくき とうきょう

Shehan Haputhanthri and Shuzhen Liu Model Based Calibration Optimization Using Machine Learning Algorithms

Possibilities With the New Tool

Scalabale parallel/distributed computing

Sequential computing(1 CPU) to parallel in HPC (1000 CPUs) Click of a button 12000 Simulink simulations (4000-6000 hours) Completed in less than 15 hours (approx.) Using 512 simulations in parallel

modeFrontier combined with MATLAB & Simulink

Machine learning algorithms Design of Experiments (DoE) Scheduling (Genetic Algorithms) Multi-objectives (+ multi-constraints) optimization Selected 12000 out of 1000000+ design combinations

Deployed and used by the MBCO team

Part III : Example Study

Shehan Haputhanthri and Shuzhen Liu Model Based Calibration Optimization Using Machine Learning Algorithms

・ロト ・ 日 ・ ・ ヨ ・ ・ ヨ ・

Optimizing Vehicle Attributes with Battery Power Table

Battery power table

Optimum power - different conditions f(Driver Pwr, Bat. SOC) Linked attributes Fuel Economy/Emissions Performance/Regeneration/NVH etc. modeFrontier - machine learning Optimize battery power table* Using Genetic Algorithms (MOGA-II) Evolutionary (generation) algorithm Simulation in HPC 512 in parallel Population size

化压力 化压

*Indirect method used - Non Uniform Rational Basis Spline (NURBS) based *Developed by Ford Model Based Systems Engineering (MBSE) team (@ RIC)

Optimizing Vehicle Attributes with Battery Power Table*

Cost function - maximize vehicle attribute(s) mentioned above Single objective optimization**
