Why Most AI Projects Fail
Oct, 2017

3 Common Reasons Artificial Intelligence Projects Fail
May, 2018
There are many ways Artificial Intelligence can fail

- No data scientists
- Beyond the skill of the team
- Too much data
- Not enough data
- Incomplete tools
- Can’t interact with other systems
- Low ROI
- Problem is a poor fit for AI
AI is more than just the intelligence of the algorithm

- **Interaction**: Operate within their environment
- **Insights**: Apply domain expertise
- **Implementation**: Span the entire system development workflow
Apply domain expertise

Intelligence

Interaction

Operate within their environment

Implementation

Span the entire system development workflow
Bring human insights into AI

1. Select data
2. Make tradeoffs
3. Evaluate results
Bring human insights into AI

- We are the domain experts
- Shortage of data scientists
- We need the right tools
Improving New Zealand Dairy Processing

Auckland University of Technology
Wanted to detect a bad product earlier

Raw Milk → Continuous Plant Process → Powdered Milk

Days later
Wanted to detect a bad product earlier

Data

- Raw Milk
- Plant Process
- Powdered Milk

AI model

Predict Results

Near real-time
But…

Data

- Raw Milk
- Plant Process
- Powdered Milk

AI model
They made several key insights

1. Results were wrong
They made several key insights

1. Results were wrong

2. Need to build a separate model for each plant

Plants behaved differently from each another
They made several key insights

1. Results were wrong
2. Need to build a separate model for each plant
3. Plant’s operating state changes each year

Each year was like a completely different plant
Bulk density prediction results were inaccurate

- Many false positives
- Unused classes
They made several key insights

1. Results were wrong
2. Need to build a separate model for each plant
3. Plant’s operating state changes each year
4. Training data was biased
They had lots of data

- Millions of data points
- 6 years
- 3 plants

Data

- Raw Milk
- Plant Process
- Powdered Milk
Resampling data resulted in higher predictive accuracy

- Resampled data
- Reduced the number of bins
“It’s great to sit down with our industry partners and watch their jaws drop when they see how productive we are with MATLAB and how quickly we can analyze and plot data. Our results have enabled them to confirm hypotheses for which they lacked evidence, and have sparked new ideas for process improvement.”

- David Wilson, Industrial Information and Control Centre
To be successful with AI, we must …

Combine AI model building with **scientific and engineering insights**

Along with **tools** that span both the **science and engineering** and the **data science**
To be successful with AI, we must …

Voyage’s goal was to quickly get to market

1. **Target retirement communities**
Voyage’s goal was to quickly get to market

1. Target retirement communities

2. Use off-the-shelf components wherever possible
Voyage’s goal was to quickly get to market

1. Target retirement communities

2. Use off-the-shelf components wherever possible

3. Bring in the right software tools across the entire workflow
Voyage completed their AI system first
But they needed to connect the AI to the rest of the system
But they needed to connect the AI to the rest of the system
Started with Simulink example that they could build upon

Adaptive Cruise Control with Sensor Fusion

This example shows how to implement a sensor fusion-based automotive adaptive cruise controller for a vehicle traveling on a curved road using sensor fusion.

In this example, you will:

1. Review a control system that combines sensor fusion and an adaptive cruise controller (ACC). Two variants of ACC are provided: a classical controller and an Adaptive Cruise Control System block from Model Predictive Control Toolbox.

2. Test the control system in a closed-loop Simulink model using synthetic data generated by the Automated Driving System Toolbox.

3. Configure the code generation settings for software-in-the-loop simulation and automatically generate code for the control algorithm.
Injected simulated vehicles to interact with while driving
Deployed controller as ROS node and generated code
