MATLAB EXPO 2019

Ingeniería de sistemas:
de los requisitos a la arquitectura y a la simulación

Luis López
Key Takeaways

- Digital thread providing traceability between requirements, architecture, and design
Key Takeaways

- Digital thread providing traceability between requirements, architecture, and design
- Connected environment for designing and analyzing architectures and designs
Key Takeaways

- Digital thread providing traceability between requirements, architecture, and design

- Connected environment for designing and analyzing architectures and designs

- Integrated platform for analyzing all parts of your architecture in one multi-domain environment

Dynamic Systems  State Machines  Discrete-Event  Physical Modeling
What does that mean?

Early in the Process
Concepts/Descriptions

Later in the Process
Models
What is the Gap?

**Early in the Process**

---

**Digital Thread**

**Connected Environment**

**Analysis & Simulation Platform**
1. Functional Requirements

1.1. Normal Mode of Operation

During the normal mode of operation, the Fault Tolerant Fuel Control System shall determine the fuel rate which is injected at the valves.

1.1.1. Stoichiometric mixture ratio

During normal model of operation, the System shall maintain the stoichiometric mixture target ratio of 14.6.

1.1.2. Oxygen Sensor (EGO)
MathWorks Solution: System Composer R2019a and

- Be Intuitive
- Facilitate Analysis
- Tackle Complexity
- Enable Implementation

Requirements Coverage Reporting and Impact Analysis

Simulink Requirements
Now let’s see it in action
How to run the Designspace model:
1. See the Aerospace Blockset User's Guide for instructions to set up FlightGear.
2. Install the dhc2 geometry model to FlightGear's data/Aircraft directory. The geometry is downloadable from www.flightgear.org.
3. To start FlightGear, ensure that it is installed and correctly configured with the virtual hardware.

Requirements - UAS_reference_architecture
